

Bird Blazer – indoor laser bird repeller

Laser beams are well-documented to chase away pest birds. The beam seeks out their roosting-spots, alarming and confusing them, and they flee. This technological breakthrough makes current hand-held, labor-intensive lasers obsolete - and opens up this proven method of bird control for general industrial use.

How it works

Lasers are a well-established method of deterring birds, most notably the use of handheld lasers on airfields to prevent devastating loss of time, equipment and lives from bird strikes. The Blazer development expands this proven technology and fills the need control bird infestations at municipal, industrial and commercial buildings: a unit that works constantly, eliminating the labor-intensity of hand held lasers, and exponentially increasing the potential uses. Bird Blazer Laser Bird Repeller is a Class 3R diode “fat beam” laser featuring strong 10 milliwatt (mW) green beams - green is shown to be the most effective against pest birds. The beams create 45 different patterns occurring in random order. This is an important feature as birds are creatures of habit and do not grow accustomed to a dynamic environment.

Specifications

- **Powerful Green Laser.** 10 mW of fat-beam laser power. The green laser light has been shown as the most disruptive to birds.
- **Works day and night.** Laser beams constantly change pattern and location to prevent acclimation
- **Easy Operation.** Remote control for ease of operation. Security keys to maintain control.

- **Large Coverage.** Maximum range 1000 feet/ 300 meters in the dark. The coverage area is up to 10000 square feet/ 929 square meters.
- **Safe operation.** Bird Blazer is a state-of-the-art consumer-safe device.
- **Quick start bird control.** Bird Blazer comes with six-foot power cord, 2 keys, remote control, mounting hardware (consisting of hanging bracket, 2 clamp levers and 2 washers) and an instruction manual.

Applications

The Bird Blazer is designed to act as an important aid in chasing birds from their infestations in plants, warehouses, loading docks, railroad sidings, tunnels, breezeways, underpasses and storage sheds. Other locations include: hangars, silos, barns, stadiums, arenas, boat houses and bell towers.

Bird Blazer is used to control Pigeons, Gulls, Swallows, Sparrows, Starlings and more.
