

Outdoor Fly Trap & Fly Lure

Keep your deck or patio free from bothersome flies.

Control those pesky backyard flies with the all-natural Outdoor Fly Trap. Simply hang the Fly Trap in a nearby corner of your yard, and let its proven attractant technology do the rest. The Fly Trap's all natural lure and bait combination is extremely effective against most species of nuisance flies, attracting them to the trap, and drawing them inside. Safe, effective, and 100% pesticide free, the Outdoor Fly Trap is the environmentally friendly way to control outdoor flies.

Fly Trap:

- Eliminates house flies, garbage flies, and other types of nuisance flies without harmful chemicals - 100% pesticide free
- Easy to use and re-use
- Catches more flies than comparable traps
- Uses proven attractant technology developed by a leading supplier of pest management products for the US Forest Service and US Department of Agriculture
- Includes one bait and one lure (lasts for ten days - refills available separately)

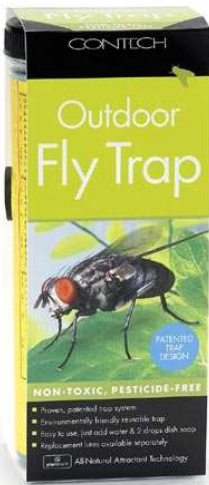

How & Why it Works

Using the Outdoor Fly Trap is easy. Simply empty the package of bait into the reusable plastic jar, add an inch of water and two drops of dish soap, and hang the trap from a tree or structure near the house or patio. (Note that the Outdoor Fly Trap is NOT intended for indoor use - it has a strong odor that makes it unsuitable for indoor use.)

The trap's patented bait and lure combination attracts nearby flies and captures them within the jar. An attractive translucent cover conceals dead flies from view. After about 10 days, simply empty the dead flies into the trash, replace the bait, and the reusable Outdoor Fly Trap is ready to go again.

The Outdoor Fly Trap uses a highly effective, yet safe and non-toxic attractant developed by Pherotech International - an industry leader in the development and commercialization of non-toxic insect trapping technology.

Applications

The outdoor fly trap safely and effectively eliminates flies in

- Front and Backyards
- Gardens and Garages
- Around pools and camp sites
- Food establishments
- Attics and Rooftops
- Other commercial facilities like cafes, warehouses and more

Simply place the trap in areas where flies are present - light colored outdoor walls, warm sunny areas, stables or food processing areas.

Specifications

The Fly Trap includes one reusable, non-toxic trap with hanger and one lure (lasts about 10 days). Lure refills are available separately.

To set up the Outdoor Fly Trap

1. Open Lid and remove loose contents.
2. Remove bait from package and place into bottom of trap.
3. Add water into jar up to Liquid Bait fill line and add two drops liquid dish soap.
4. To hang trap, tie a knot on one end of the hanger and feed through lid.
5. Replace lid and attach hanger to sturdy object such as a fence or tree branch.
6. Place trap away from people and pets, in areas where flies are present. Bait has a strong scent – trap NOT recommended for use indoors.
7. Empty trap contents into garbage as required and replace bait, water and liquid dish soap.
8. Bait will last 7-10 days. Replacement bait is available separately
9. Avoid contact with the bait and remove spilled bait with soapy water.

Empty contents of trap into garbage when full or after 7-10 days. Replace bait, water and soap.

Frequently Asked Questions

Can I use the Outdoor Fly Trap in the house?

Although the Outdoor Fly Trap is safe to use inside, the attractant has a strong, unpleasant scent (attractive to flies, but not to people), making it best suited for open environments.

The trap has been working well, but now it's almost empty – Why?

The trap may have caught most of the flies in the area. It's not unusually for a trap to out-catch nearby flies, controlling the local infestation.
