

Pigeon Cage Trap

Double door folding Pigeon trap.

The Pigeon cage trap makes it easy to control the Pigeon population on any property.

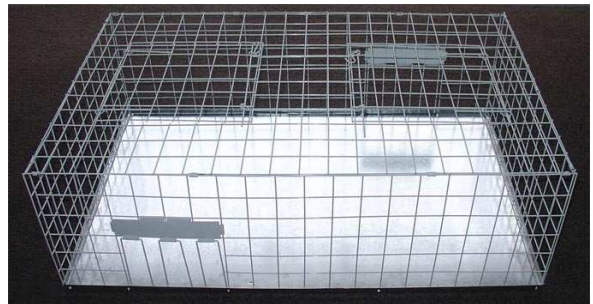

PIGEON CAGE TRAP

How It Works

The birds enter the trap as they eat the grain. The special trapping mechanism of the door prevents the trapped Pigeons from escaping. Two convenient release doors are located on top of the trap. These provide easy access to the trapped birds.

SPECIFICATIONS

- Collapsible trap for easy storage and transport
- Easy to use double door design
- Two release doors located on top of the trap
- Weatherproof design
- Dimensions: 980mm x 620mm x 320mm (unfolded)
980mm x 620mm x 40mm (folded)
- Weight: 7Kgs

Trapping Instructions

- Pre-bait the area for several days before introducing the trap.
- Use grain, cereal or dry bread as bait. After the pigeons become familiar with the new eating spot, place the cage trap over the feed.
- Bait the pigeon cage trap with a trail of grain on the outside and leading into the trap doors. Make sure to place the majority of the bait inside the pigeon trap.
- Continue to pre-bait the trap for several days until the Pigeons become familiar with walking in and out of the trap. To pre-bait the trap, simply tie up the trap doors. The pigeons will eat the grain and freely walk in and out of the trap.
- After the pigeons become familiar with the trap, simply untie the doors.

Remember to always check your Pigeon cage trap on a daily basis.

Applications
