

Terror Eyes - moving eye holographic bird repeller

Repel pigeons, sparrows, starlings, gulls and more with a vinyl inflatable predator that frightens bird pests away!

Huge 2-foot hanging ball has menacing, moving eyes on front and back that strike fear in birds!

How it Works

Lenticular eyes produce holographic effects, constantly moving and changing as if they are "following" infesting birds. Made of brilliantly colored heavy duty vinyl; scientifically designed from extensive experience and research on predator and bird behavior.

3-D eyes move forward and sideways following bird pests as they fly away. Hanging spring and air currents do the rest... a totally realistic and scary visual deterrent!

Specifications

- TOUGH. Made of heavy duty vinyl.
- HUGE. Terror Eyes comes as a 2-foot hanging ball.
- COLORFUL. Brilliantly colored eyes with holographic effects that are constantly moving and changing.

Applications

TERROR-EYES are a great visual deterrent to control Pigeons, Sparrows, Starlings, Gulls, and more. Applications are building roofs, airports, outdoor restaurants, boats, warehouses, orchards, vineyards, farm fields, gardens and others. Terror Eyes are perfect in combination with other audible bird repellents and other roost inhibitors.

Instructions

1. Remove any nests and clean these previously infested areas as much as possible.
2. Do not over-inflate TERROR-EYES. In fact, slightly under-inflate, about 85%.
3. Locate TERROR-EYES close to the roosting birds, with good line-of-sight to the infested areas.
4. When installing more than two units, hang them each at a different height (a minimum of one unit diameter apart.)
5. To increase the random motion of TERROR-EYES, use the coil spring provided, and reinforce it with a piece of strong twine slightly longer. This should prevent distorting the spring.
6. When suspending TERROR-EYES from a rope, it is helpful, especially in windy areas, to anchor the unit to something stable below; use the loop on the bottom of TERROR-EYES.
7. To prevent the birds' becoming used to TERROR-EYES, occasionally relocate.
8. Punctures may be easily repaired with a vinyl bonding agent.
